

Calcium Hypochlorite “SHELF LIFE”

Calcium Hypochlorite has a guaranteed shelf life of meeting the minimum available chlorine, as stated on the package, for a period of one year from date of shipment when stored and handled under proper conditions.

Proper storage conditions include:

- Store in a cool (less than 90⁰ F), dry, well-ventilated area away from direct sunlight. Temperatures in excess of 90⁰F will accelerate the loss of available chlorine of calcium hypochlorite.
- A minimum of 2 air changes/day is recommended to prevent moisture pick-up and sweating of containers.
- Do not store in an area subject to flooding.
- Store on double-faced pallets to prevent possible water damage and uneven distribution of weight.

Over time, calcium hypochlorite will absorb moisture, which will accelerate the loss of available chlorine. Proper stock rotation is required.

The user is responsible to monitor for any changes that may be the result of storage and handling conditions.

Disclaimer

This calcium hypochlorite shelf life statement is intended to provide INFORMATION for review by Axiall Corporation's customers.
